## **Dear friends !**

Many of us want to attract investments in various projects, many of our partner investors offer various forms of cooperation. Check out below the conditions for investing in the economic center of the "Alliance of the Peoples of the World"!

What is the peculiarity of the investment projects of the economic center of The Alliance of the Peoples of the World !

An investment project is an economic or social project based on investments.

Investments must be economically justified, have a certain period and predetermined volumes. This requires design estimates or a business plan for investment projects.

A feature of the investment process is its association with uncertainty about the costs incurred and the results obtained in the future, the degree of which can vary significantly. Thus, depending on the magnitude of the risk, investment projects are divided into:

- reliable, risk-free projects characterized by a high probability of obtaining guaranteed results (for example, projects carried out on a government order);
- risky projects, which are characterized by a high degree of uncertainty of both costs and results (for example, projects related to the creation of new industries and technologies).

Types and types of investment projects

- production projects;
- scientific and technical projects;
- commercial projects;
- financial projects;
- economic projects;
- social and economic projects.

Investment projects can be divided into many types, according to their specifics.

Types of investment projects by investment objectives:

- investments aimed at increasing output;
- investments aimed at expanding the range of products;
- investments aimed at improving the quality of manufactured products;
- investments aimed at reducing production costs;
- investments in social programs.

Types of investment projects according to the terms of investments:

- large investments with investments exceeding USD 1,000,000. Large projects - projects of large enterprises, which are based on a progressive, new idea for the production of products necessary to meet demand in the domestic and foreign markets;
- Medium investments up to USD 1,000,000. Medium projects are most often projects for the reconstruction and technical re-equipment of existing production facilities. They are implemented in stages, for individual industries, in strict accordance with pre-designed schedules for the receipt of all types of resources, including financial ones;

small investments up to USD 100,000. Basically, small investment projects are plans to expand production and increase the range of products. They are distinguished by relatively short implementation times. Small projects usually do not require much elaboration of the feasibility study and related issues.

Megaprojects are also being implemented in practice. These are targeted investment programs that can be international, state and regional for countries - members of the "Alliance of the Peoples of the World".

By main focus:

- commercial projects, the main purpose of which is to make a profit;
- social projects focused, for example, on solving the problems of unemployment in the region, reducing the level of crime, etc.;
- environmental projects based on the improvement of the environment.

From the point of view of the project participants:

- state enterprises;
- joint ventures;
- foreign investors.

In practice, this classification is not exhaustive and allows further detailing.

The second stage of the investment project is the most capital-intensive. At this stage, it is impossible to stop investing, because this can lead to large financial losses. During this period, the formation of fixed assets is carried out in the form of the acquisition of premises, equipment or the start of construction.

The third stage of the investment project is characterized by a return on investment, but taking into account the current costs associated with the operation. The longer this stage lasts, the higher the return on investment will be.

Payback period of the investment project

Essential in the decision to implement direct investment is the payback period of the investment project.

The payback period of an investment project is equal to the period between the day the investment project is financed and the day when all project costs are paid off and the investment project starts to make a profit.
